21. (new) A decorative mobile construction, comprising:
a planar web having a defined perimeter configuration;
a spline portion extending along a medial portion of said web;

a plurality of generally parallel cut lines in said web radiating from said spline portion and defining separable strips that are integrally attached to said spline portion at the inner ends of said strips; the inner ends of said strips on one side of said spline portion being linearly offset from the inner ends of said strips on the other side of said spline portion; said strips being movable out of the plane of said planar web to form a three dimensional assembly; and means for suspending said assembly.

22. (new) The decorative mobile construction of claim 21, wherein said cut lines are arrayed as a set of nested curves extending from said spline portion and defining a plurality of concentric loops integrally joined to said spline portion.

23. (new) The decorative mobile construction of claim 22, wherein said nested curves extend generally parallel to said perimeter of said web.

24. (new) The decorative mobile construction of claim 21, wherein said perimeter is a rhomboidal configuration.

25. (new) The decorative mobile construction of claim 21, wherein said perimeter is an oval configuration.

26. (new) The decorative mobile construction of claim 22, wherein said cut lines are arrayed as first and second sets of nested curves extending from said spline portion and defining first and second sets of concentric loops integrally joined to said spline portion and extending from each side of said spline portion.

27. (new) The decorative mobile construction of claim 21, wherein said perimeter is an oval construction.

28. (new) The decorative mobile construction of claim 21, wherein the outer ends of said strips are integrally attached to said web adjacent the perimeter of said web.

29. (new) The decorative mobile construction of claim 21, wherein the outer ends of said strips are free from said web.

30. (new) The decorative mobile construction of claim 21, further including second spline portions extending along opposed edge portions of said web.

31. (new) The decorative mobile construction of claim 30, wherein said cut lines on each side of said first mentioned spline portion extend from their respective sides of said first mentioned spline portion to define a plurality of fingers integrally joined at opposed ends to said first mentioned spline portion and to one of said second spline portions.
